Missouri Weekly Influenza Surveillance Report
2022-2023 Influenza Season[1]

Week 11: March 12, 2023 – March 18, 2023

All data are preliminary and may change as more reports are received.

Summary:

- Seasonal influenza activity and the Influenza-like illness (ILI) activity in Missouri remained Local[2] and decreased to Level 3 in the minimal category[3], respectively during Week 11.

- During Week 11 a total of 132 laboratory-positive[4] influenza cases (65 influenza A, 67 influenza B and 0 untyped) were reported. The influenza type for reported season-to-date cases includes 94.4% influenza A, 5.2% influenza B and 0.4% untyped. The percentage of respiratory specimens testing positive for influenza in Missouri laboratories reporting to the National Respiratory and Enteric Virus Surveillance System (NREVSS) was 0.28% for Week 11.The number of Missouri facilities reporting to NREVSS for Week 11 was limited at the time of this report.

- Influenza-like illness activity for the hospital emergency room visit chief complaint data reported through ESSENCE decreased to 1.93% for Week 11 (Figure 6).[5]

- Two hundred thirty two influenza-associated deaths have been reported in Missouri as of Week 9 (week ending March 4, 2023).[6]

- Eleven influenza outbreaks and two influenza-associated school closures have been reported as of Week 11.

- Seasonal influenza activity continues to decline nationwide. National influenza surveillance information is prepared by CDC and is included in the weekly FluView report, which is available online at http://www.cdc.gov/flu/weekly/fluactivitysurv.htm.

---

[1]The 2022- 2023 influenza season begins CDC Week 40 (week ending October 8, 2022) and ends CDC Week 39 (week ending September 30, 2023).

[2]Local is defined as: Outbreaks of influenza or increase in ILI cases and recent laboratory-confirmed influenza in a single region of the state..
[3] ILI Activity indicates levels of activity on a scale of 1-13 ranging from minimal to very high. For more information see https://gis.cdc.gov/grasp/fluview/main.html

[4]Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

[5]ILI is defined by ESSENCE as Emergency Department chief complaints for Influenza or (FeverPlus and (Cough or SoreThroat) and not NonILIFevers).

[6]Influenza deaths are collected from Missouri's death certificate data. Decedents with influenza listed as a cause or contributor to death are classified as an influenza-associated death. Death certificate data are generally available two weeks following the current CDC week.
