

Missouri Weekly Influenza Surveillance Report 2022-2023 Influenza Season¹

Week 19: May 7, 2023 – May 13, 2023

All data are preliminary and may change as more reports are received.

Summary:

- Seasonal influenza activity and the Influenza-like illness (ILI) activity in Missouri remained Sporadic² and Level 2 in the minimal category³, respectively during Week 19.
- During Week 19 a total of 92 laboratory-positive⁴ influenza cases (38 influenza A, 54 influenza B and 0 untyped) were reported. The influenza type for reported season-to-date cases includes 93.7% influenza A, 5.9% influenza B and 0.4% untyped. The percentage of respiratory specimens testing positive for influenza in Missouri laboratories reporting to the National Respiratory and Enteric Virus Surveillance System (NREVSS) was 0.33% for Week 19.
- Influenza-like illness activity for the hospital emergency room visit chief complaint data reported through ESSENCE decreased to 1.29% for Week 19 (Figure 6).⁵
- Two hundred forty four influenza-associated deaths have been reported in Missouri as of Week 17 (week ending April 29, 2023).⁶
- Thirteen influenza outbreaks and two influenza-associated school closures have been reported as of Week 19.
- Seasonal influenza activity continues to decline nationwide. National influenza surveillance information is prepared by CDC and is included in the weekly FluView report, which is available online at <http://www.cdc.gov/flu/weekly/fluactivitysurv.htm>.

¹The 2022- 2023 influenza season begins CDC Week 40 (week ending October 8, 2022) and ends CDC Week 39 (week ending September 30, 2023).

²Sporadic is defined as: Small numbers of laboratory-confirmed influenza cases or a single laboratory-confirmed influenza outbreak has been reported, but there is no increase in cases of ILI.

³ILI Activity indicates levels of activity on a scale of 1-13 ranging from minimal to very high. For more information see <https://gis.cdc.gov/grasp/fluview/main.html>

⁴Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

⁵ILI is defined by ESSENCE as Emergency Department chief complaints for Influenza or (FeverPlus and (Cough or SoreThroat) and not NonILIFevers).

⁶Influenza deaths are collected from Missouri's death certificate data. Decedents with influenza listed as a cause or contributor to death are classified as an influenza-associated death. Death certificate data are generally available two weeks following the current CDC week.

Data Figures

Figure 1. Number of Laboratory-positive[†] Influenza Cases by Influenza Type, Missouri, CDC Weeks 17-19 (April 23, 2023 – May 13, 2023)*

Influenza Type	Week 17	Week 18	Week 19	2022-2023* Season-to-Date
Influenza A	51	40	38	101,377
Influenza B	88	61	54	6,341
Influenza Unknown Or Untyped	1	1	0	482
Total	140	102	92	108,200

[†]Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

*Influenza season begins with the week ending October 8, 2022 (CDC Week 40) Data Source: Missouri Health Information Surveillance System (WebSurv).

Figure 2. Number of Laboratory-positive[†] Influenza Cases and Case Rates by Age Group, Missouri, CDC Week 19 (May 7, 2023 – May 13, 2023)*

Age Group	Week 19 Cases	Week 19 Rate [‡]	2022-23* Season-to-Date	2022-2023* Season-to-Date Rate [‡]
00-04	7	1.90	15,966	4,337.64
05-24	26	1.66	45,400	2,902.80
25-49	30	1.54	23,061	1,186.82
50-64	9	0.75	11,992	999.16
65+	20	1.88	11,780	1,109.19
Total	92	1.50	108,200	1,762.95

[†]Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

*Influenza season begins week ending October 8, 2022 (CDC Week 40) Data Source: Missouri Health Information Surveillance System (WebSurv)

[‡]Incidence Rate per 100,000 population

Figure 3. Number of Laboratory-positive[†] Influenza Cases and Case Rates by Region, Missouri, CDC Week 19 (May 7, 2023 – May 13, 2023)^{}**

Region	Week 19 Cases	Week 19 Rate [‡]	2022-23* Season-to-Date	2022-23* Season-to-Date Rate [‡]
Central	18	2.67	11,342	1,680.75
Eastern	11	0.49	30,076	1,326.23
Northwest	30	1.83	30,978	1,892.67
Southeast	9	2.08	12,519	2,894.98
Southwest	24	2.28	23,285	2,216.29
Total	92	1.50	108,200	1,762.95

[†]Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.
